

# Release Notes

FROM THE COMPANY MAKING MARKETERS POWERFUL.

Date: Sep 24, 2025

Version 2.4.5

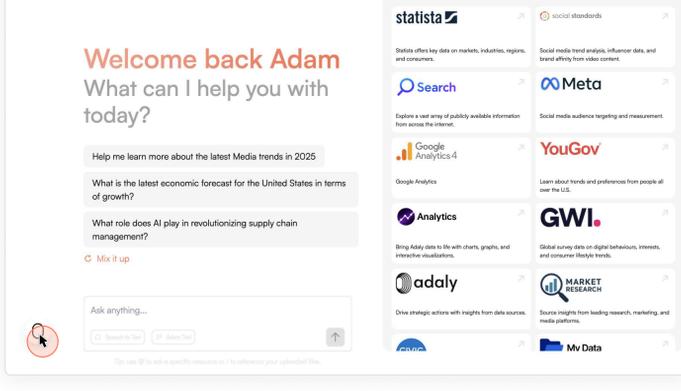

## Summary

It's a small release, but a meaningful one. The new Agentics Reporting Agent turns saved insights into full reports in the background—no workflow interruptions. Plus, we've made bug fixes and performance upgrades across the platform.

## New Features

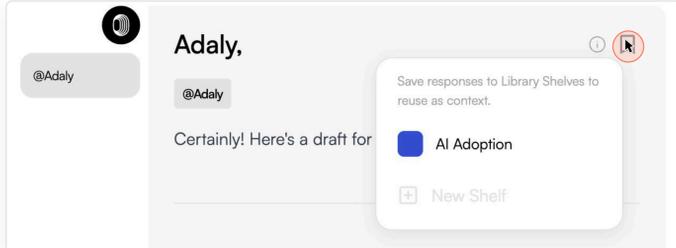

### COMPETITIVE REPORTING AGENT Experimental

Our latest Agent is designed to help you build competitive intelligence reports faster—without interrupting your workflow. Reports run in the background while you keep working, and when they're done, you can export in PDF, PowerPoint, or Word format.

You'll find the Agent button in the bottom-left corner—accessible from any page.

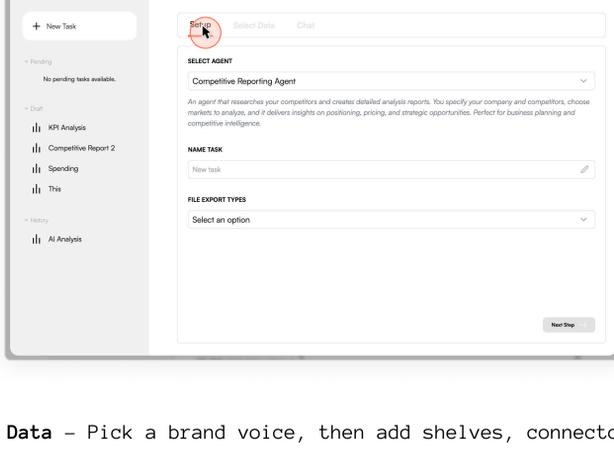

### Key Capabilities

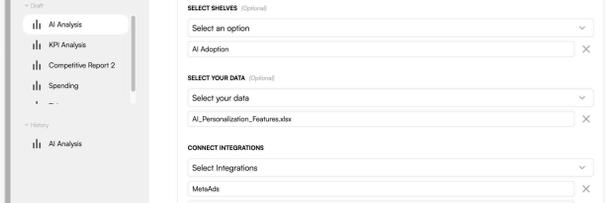

**Shelf Integration:** Save key responses while chatting with Adaly, then use them directly as inputs for your report.

### Simple 3-Step Workflow:

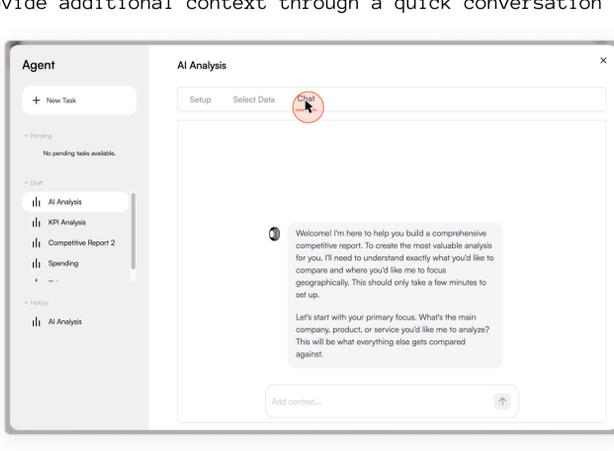

**Set Up** – Select the agent, name your report and choose your export format.

**Select Data** – Pick a brand voice, then add shelves, connectors, and relevant files.

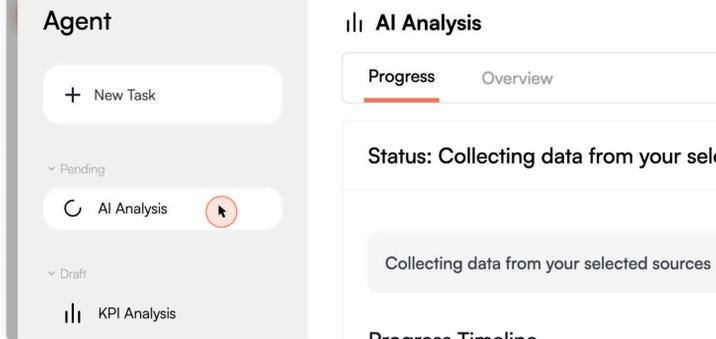

**Chat** – Provide additional context through a quick conversation with Adaly.

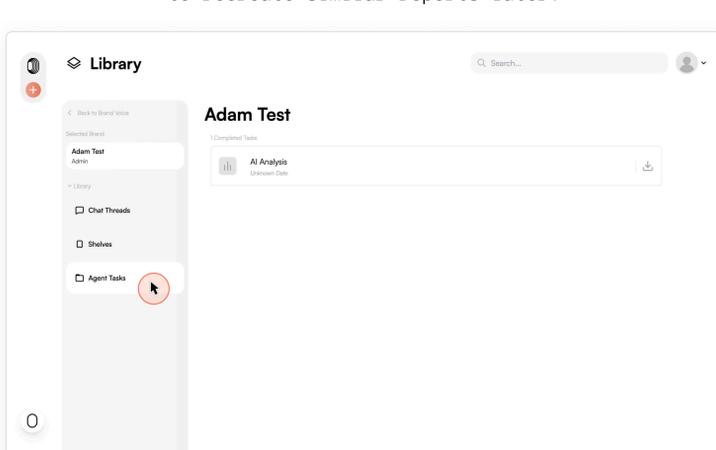

### Runs in the Background:

Reports take 30–60 minutes to complete. Check progress in the Agent modal while continuing your work.

### Stored + Exportable:

Completed reports are saved to the Library under the brand voice used. You can export from there or the Agent modal—and easily review inputs to recreate similar reports later.

### Suggested Workflow

Start by chatting with Adaly. When insights stand out, save them to a Shelf. Then, when you're ready, launch the Competitive Report Agent, add your shelf as an input, and let it generate a professional-grade report while you focus on other tasks.

## Feature Enhancements

### STICKY DATA SOURCE SELECTION

When you query a data source, the source tag now **stays pre-filled** in the query bar—making it faster and easier to ask follow-up questions without reselecting the source each time.

### RESTRUCTURED @Search + @MarketResearch SIDE PANELS

We've redesigned the experience when querying **Search** or **Market Research**:

- The side panel now opens **automatically** upon query.
- It displays the **source URL** at the top, followed by a **generated summary/analysis** of the content—giving you faster access to key insights.

## Bug Fixes

We've also made multiple bug fixes and performance optimizations across the platform to keep things running smoother than ever.

And that's it for now!
